Task	Time	Observations
1	12:21	Searched Enigmail via Google and installed it via Ubuntu software center
2	12:24	Do they have any requirements for the password?
	12:25	So far easy to use
	12:26	Where to save it? (revocation certificate)
3	12:28	Where are the keys saved?
	12:28	He googles for documentation because he assumes it must be a typical task that's why it should be explained somewhere
	12:28	Found the Enigmail Wiki
	12:31	Key Management > copy public key and add to email
5	12:36	Googles about the enigmail keyserver > Enigmail Wiki
	12:38	He can't find the button „keyserver“ > Ubuntu hides the top menu bar if you don't hover over it and that is where the menu bar of the Key Manager window is hidden
	12:40	Can't figure out what order they are using to sort the results
	12:42	Good way to order it > if you don't know what name the other person uses
6	12:44	Googles again > Enigmail Wiki
	12:45	Enigmail checks the email-address and encrypts itself > very convinient
	12:46	Email is already decrypted
7	12:47	Very convinient > just has to press the buttons
	12:48	Documentation is very well done for anybody
	12:48	He actually thinking about installing it
	12:51	He knows a bit about the Web of trust and that is why he is not confused about the term untrusted
	12:52	Documentation of Enigmail about untrusted signature is good
9	12:55	Encrypted the email with his public key
	12:57	Found the button „Download missing keys“
Interview	12:59	The button should be more visible
	12:59	Maybe some tips that pop up at the start
	12:59	They should recommend the Wiki > if you don't know anything about it the website is really good
	13:00	Very convinient to use > just two buttons and the installing was easy too
	13:00	Blends in the Thunderbird design very well
	13:01	Thought it would be more complicated

	13:03	Automatically attached public key: - first: easier to spread Enigmail but some information would be needed - second: don't want to get used to advertise Enigmai
